Madhusudan Bhukta

Backend & AI-Native Software Developer

madhusudanbhukta.dev@gmail.com — github.com/megabytis — linkedin.com/in/madhusudan-bhukta — Portfolio

SUMMARY

Backend Developer specializing in scalable REST APIs, modular architectures, and AI workflow integration. Currently building and integrating Python AI/ML services with Node.js backends in a production CRM/HRM system at Detagenix Pvt. Ltd.

SKILLS

Languages: JavaScript (ES6+), Python, SQL
Backend: Node.js, Express.js, REST API Architecture, FastAPI
Databases: MongoDB, Mongoose, Redis, ChromaDB (Vector)
Auth & Security: JWT, Refresh Tokens, RBAC
Engineering & AI: Caching, Rate Limiting, Pagination, Indexing, RAG Pipelines, Hybrid Search
Tools: Git, GitHub, Postman, Render, Vercel, Docker, Linux (Arch)

EXPERIENCE

MERN Stack Developer Intern | *Detagenix Pvt. Ltd.* **May 2026–Present**

- Integrated pre-built Python AI/ML modules with a Node.js Express backend for a production CRM/HRM system.
- Built REST APIs to bridge Node.js and FastAPI services, enabling seamless cross-service communication.
- Connected React frontend with backend APIs and resolved critical cross-service bugs in production.

PROJECTS

RAG-DocumentQnA (AI-Powered Document Search Engine) *Node.js, Python, ChromaDB, LangChain*
github.com/megabytis/RAG-DocumentQnA

- Built dual-service architecture — Node.js API gateway + Python AI backend — supporting PDF, TXT, DOCX parsing with isolated user session context.
- Minimized LLM hallucinations using Hybrid Search (Dense + BM25) with Cross-Encoder Re-ranker for accurate context retrieval.

Project KYH – AI Fitness Agent *(In Development)* *Python, LangGraph, MongoDB, Telegram Bot*
github.com/megabytis/project-kyh

- Building a personal AI fitness coach via Telegram — logs meals, workouts, and sleep conversationally with auto macro calculation via LLM.
- Designed multi-schema MongoDB architecture and LangGraph agent with persistent memory for pattern detection across days.

ShopNexus (E-Commerce Backend Platform) *Node.js, Express, MongoDB, Redis, Stripe*
shop-nexus-beta.vercel.app

- Reduced API response time via Redis caching with cache invalidation strategy; load-tested for system stability.
- Implemented JWT auth, refresh tokens, RBAC, and full Stripe payment lifecycle with domain-driven models.

EDUCATION

Bachelor of Computer Applications (BCA), 2024–2027
NIIS Institute of Business Administration, Bhubaneswar, Odisha, India
